No Shield From Rising Bills
For Seasonal Residents

Standing in her kitchen in Fort Myers, Karen Rosenblatt says she has
been unable to watch the news without being reminded of the two-
 tier property-tax system that affects her and other seasonal residents.

``It's not my home," she said. "But it's my heart." Rosenblatt, a 55-year-old
retiree who spends much of her year in Florida, is one of the many
seasonal residents who have come together in a grass-roots effort
to change what they consider "excessive" and unfair property
prices in Lee County.

``For a lot of people, the two-tier system means they don't feel welcome,\n" says Rosenblatt, who with her husband, Michael, has lived in Fort
Myers for nearly five years. "It's a simple issue of fairness.\n"

Rosenblatt is one of the many who participated in a protest
against the property-tax system in the local community this month.\n
``I think the protest was just the beginning," said Rosenblatt. "We're
just getting started." Rosenblatt said she is hoping to raise awareness
about the issue and eventually work towards changing the system.

``We need to find a way to make the two-tier system work for everyone,"\nsaid Rosenblatt. "It's time for change." Rosenblatt said she is
looking forward to seeing what the future holds for the two-tier
property-tax system in Lee County.

Matter of Timing: Five More Firms Show Options Selection Patterns

The groundbreaking new Airbus A380 is the world’s largest passenger jet. While at the same time setting new standards for fuel efficiency and quiet operation. Some of SKF’s contributions were a patented new technology and lightweight design, which reduced weight by 40% compared to conventional systems. The concept is simple: less weight means less energy, and that means less pollution in the air we breathe.
