While Corruption Still Hobbles Latin American States, A Few Cities Get Results

On Web: Mr. Sadat’s Rent

By HAJER AMMAR

AMMAN, Jordan—For a while, the city of Amman’s main commercial avenue was notable for its chronic gridlock. One minute, drivers would be backed up for blocks; the next, there would be lanes of open road.

The root of the problem is simple: There are too many vehicles on the road, and not enough efficient rules to direct them. But Amman’s leaders have taken steps to improve the situation, and while traffic is still congested, local officials say much is still better than it once was.

Amman is not the only city that is struggling with traffic, and many others around the world are trying to find solutions. In many cases, governments have implemented policies to reduce congestion, such as tolls and transit improvements. But in Amman, the focus has been on education and public awareness.

This is a common strategy in many cities, as it can be a way to reduce traffic congestion without the need for expensive infrastructure changes. In Amman, the city has launched a campaign to educate drivers on the importance of traffic rules and to encourage them to use public transportation.

The results have been promising, with traffic congestion significantly reduced in some areas. However, there is still a long way to go, and the city continues to work on ways to further improve the situation.

For more information on traffic congestion and solutions, you can visit the website of the World Bank or the United Nations Human Settlements Programme. These organizations provide resources and information on traffic congestion and how to address it.

One of the key factors in reducing traffic congestion is to encourage the use of public transportation. This can be done through the provision of better and more frequent public transportation services, as well as incentives for using public transportation, such as lower fares and reduced travel times.

Another strategy is to promote the use of non-motorized transportation, such as walking and cycling, as these modes of transportation are not only good for the environment, but also for the health of individuals.

In conclusion, while traffic congestion is a significant challenge in many cities, there are strategies that can be implemented to improve the situation. By focusing on education, public awareness, and incentives for the use of public transportation, cities can work towards reducing traffic congestion and creating a safer and more sustainable transportation system for all.
Workers Are in Dark on Health of Pension Plans

For years, the airline's main bankruptcy lawyer, Perrin, was using to prepare US Airways. He and other lawyers had a limited view of the country's largest pension cases. The case has not been decided. The case has not been decided.
