"Combining theory rigorously with econometric data to reopen the question of the validity of the Heckscher-Ohlin theory of comparative advantage, this is an important work."

— Jagdish N. Bhagwati, Arthur Lehman Professor of Economics, Columbia University

"Learner's new book represents one of the most serious attempts at linking economic theory with observations that I have ever encountered. The underlying intellectual honesty in approaching all economic problems involved is most impressive and should serve as a shining example to all applied econometricians."

— Jan Kruttschnitt, Professor of Economics and Statistics, University of Michigan
