Across California and the country, climate change is already threatening people's lives, health, and built environments. We have seen both dramatic and invisible climate impacts — from record-breaking wildfires and floods to extreme heat events — challenge communities to prepare, respond, and when necessary, rebuild. However, these questions of resilience and rebuilding raise the daunting question of climate-driven displacement and migration.

During the third session of our series, we will discuss the question of whether, when, and how we build and rebuild in high-risk areas. We will then look beyond climate threats, and turn our discussion to the impact of climate solutions. The life-saving strategies of greening, public transit, etc. increase resilience to climate change, but they may also lead to gentrification and displacement of already vulnerable communities. Our discussion will bring together UCLA researchers, community partners, and on-the-ground experts who navigate these questions of displacement and resilience in their daily work. Each will share the opportunities and challenges they have faced and will highlight the cross-sectoral practices that can help communities become more resilient and respond to the climate effects of displacement. This discussion is not to be missed.

PANELISTS

Jessica Bremner, MA
Consultant at Kounkuey Design
Initiative and PhD Candidate at the
UCLA Luskin School of Public
Affairs

Dan Efseaff
District Manager
Paradise Recreation and Parks
District

**David Eisenman, MD,
MSHS (Moderator)**
Deputy Director at UCLA Center
for Healthy Climate Solutions,
Director of the UCLA Center for
Public Health and Disasters, and
Professor at the David Geffen
School of Medicine at UCLA and
UCLA Fielding School of Public
Health

Liz Koslov, PhD
Assistant Professor
UCLA Department of
Urban Planning and
Institute of Environment
and Sustainability

Ryan Luster
Senior Project Director
The Nature Conservancy
